

## USecure ▪ Platform ▪ Overview

Reduce human cyber risk with one comprehensive solution  
- simplified through automation

Through intelligent automation, the platform combines continuous training with regular **phishing simulations**, simplified **policy management** and **behavioural risk scores** - enabling you to assess and mitigate your organisation's human cyber risk with leading technology and a user-first approach.

<b>Learn</b>	<b>Cyber Security Awareness Training</b>	Drive cyber security awareness with user-tailored training.	
<b>Phish</b>	<b>Phishing Simulation Software</b>	Determine user vulnerability to sophisticated phishing attacks.	
<b>Breach</b>	<b>Email Account Exposure Check</b>	Identify and safeguard exposed employee email accounts.	
<b>Policy</b>	<b>Policy Management Software</b>	Simplify policy management and ensure user acknowledgement.	
<b>Risk Score</b>	<b>Behavioural Cyber Risk Calculator</b>	Understand your organisation's human cyber risk.

## Learn ▀ Overview

### Reduce insider threats with user-tailored security awareness training

Learn enables your organisation to easily deploy continuous security awareness training in the most time-efficient and cost-effective way. Packed with engaging training content, **Learn** crafts user-tailored programmes and eliminates repetitive admin tasks through automation - reducing insider threats, data breaches and ransomware, while meeting the demands of compliance standards such as GDPR and PCI.

 <p><b>Assess vulnerabilities and build a risk profile</b></p>	 <p><b>Drive awareness with continuous training</b></p>	 <p><b>Track progress and demonstrate compliance</b></p>
---	--	---

### Key Benefits

- 

**Rapid Deployment & Automated Admin**  
By enabling the 'AutoEnrol' feature, Learn launches your users' training instantly and manages admin tasks.
- 

**Deliver Programmes Unique to Each User**  
Learn identifies initial user infosec vulnerabilities, then prioritises their courses to strengthen these areas first.
- 

**Library of Infosec & Compliance Courses**  
Educate your users on an ever-growing library of information security and compliance-based courses.
- 

**Build Courses Unique to Your Organisation**  
Easily create custom courses unique to your business, all with Learn's unique 'Custom Course Builder'.
- 

**Video & Interactive Course Content**  
Keep your users engaged and maximise knowledge retention with video and interactive content.
- 

**Custom Reporting & Weekly Summaries**  
Assess different departments of your business and obtain weekly progress reports.

## Phish ■ Overview

Assess user vulnerability to sophisticated phishing attacks

Phish automates regular phishing assessments alongside your users' training programme, determining user risk towards common attacks while ensuring training effectiveness. Your automated feature, **AutoPhish**, periodically deploys a range of common phishing attacks, tracking real-time compromised rates and highlighting key trends.

*(Note - simulations can be automated or deployed manually)*

 <p><b>Determine user susceptibility to phishing</b></p>	 <p><b>Automate regular phishing assessments</b></p>	 <p><b>Empower users to combat sophisticated attacks</b></p>
---	---	---

### Key Benefits

- 

**Automate Regular Phishing Simulations**  
Enable 'AutoPhish' and automate regular simulations (templates and frequency are customisable).
- 

**Choose From Realistic Pre-made Templates**  
Phish comes with a library of pre-made templates impersonating some of the world's most trusted brands.
- 

**Easily Create Custom Phishing Templates**  
Easily create custom templates and deploy simulations impersonating internal communications.
- 

**View Real-time Compromised Rates**  
Gain an insight into how your users interact with phishing attacks in real-time.
- 

**Customise Reports & Segment User Groups**  
View in-depth reports and segment users based on departments, seniority and more.
- 

**Spot Common Trends & Key User Insights**  
Digest your users performance and behaviour over a custom period of time.

## Breach ■ Overview

### Identify and safeguard exposed employee email accounts

With millions of email login credentials exposed online due to third-party data breaches, users with vulnerable accounts could be targeted by social engineering and business email compromise (BEC) attacks. **Breach** quickly identifies which employee accounts are exposed in data dumps, paste sites and hacking forums, as well as which service leaked the user's details and what sensitive data is available.

 <p><b>Identify user accounts that are exposed online</b></p>	 <p><b>Automate continuous exposure checks</b></p>	 <p><b>Educate users on how to keep accounts safe</b></p>
--	---	--

### Key Benefits

- 

**Quickly Locate Exposed User Email Accounts**  
Breach will rapidly identify which email accounts are at risk - bringing your results back in minutes.
- 

**Search Online Data Dumps & Paste Sites**  
Breach conducts a deep web investigation into hacking forums, paste sites and data dumps.
- 

**Obtain Full Exposure Report in Minutes**  
View your organisation's overall breaches and assess individual account exposures.
- 

**Learn What Data Is Publicly Disclosed**  
Identify the exposed data of each user - including usernames, passwords, phone numbers and more.
- 

**Automate Regular Exposure Checks**  
Breach will automatically run regular exposure checks and update your dashboard for quick viewing.

## Policy ▀ Overview

Simplify policy management and ensure user acknowledgement

Manually updating users on policy updates and chasing signatures is a timeconsuming, outdated and ineffective approach. **Policy** simplifies policy communications and user acknowledgement by automating the process - sending policy changes directly to your users' inbox and tracking who has opened and signed their document.

 <p><b>Automate policy communications</b></p>	 <p><b>Ensure user acknowledgement</b></p>	 <p><b>Track signatures and automate reminders</b></p>
--	---	---

### Key Benefits

- 

**Notify Staff of New Corporate Policies**  
Have new corporate policies sent directly to your users email inbox.
- 

**Update Users On Policy Amendments**  
Ensure policy updates get communicated by delivering and tracking updated docs via email.
- 

**Use Pre-Made Policies Or Create Your Own**  
Policy contains a library of pre-made policies, incl. Data Breach Response, Email, Acceptable Use and more.
- 

**Upload Custom Policies**  
Deliver and track your organisation's custom policies within Policy.
- 

**Track Who Has Or Hasn't Signed**  
Identify which users have opened your policy document and which have provided a signature.

**What's next?**

## Risk Score ■ Overview

### Understand your organisation's human cyber risk

Determining the human risk-level of your organisation and assessing how your users are progressing can be difficult to measure. **Risk Score** quantifies your employee threat-level by collating various behavioural metrics from the platform, and collating them into an overall grade.

*(Low-High for end-users, 0-900 for entire organisation)*

 <p><b>Assess your organisation's human risk level</b></p>	 <p><b>Dig deep into individual risk score</b></p>	 <p><b>Visualise how user risk changes over time</b></p>
---	---	---

### Key Benefits

- 

**View Overall Risk Level From Your Dashboard**  
Access a high-level overview measuring your organisation's risk score from 0 (low) to 900 (high).
- 

**Access Your Users' Individual Risk Scores**  
View the risk profile of your users, ranging from high, medium to low.
- 

**See How User Scores Change Over Time**  
Assess how your organisation's risk score changes over a 12-month period.
